# Sample Questions and Answers (Extended)
qa_list = [
    ("Q1. What is PHP?",
     "A: PHP is a server-side scripting language designed for web development but also used as a general-purpose programming language."),

    ("Q2. What is Laravel?",
     "A: Laravel is a PHP web application framework with expressive, elegant syntax. It provides tools for routing, authentication, sessions, and caching."),

    ("Q3. Difference between GET and POST methods?",
     "A: GET sends data via URL, suitable for small data. POST sends data in the request body, suitable for secure and large data."),

    ("Q4. What is REST API?",
     "A: REST API is an architectural style for designing networked applications using HTTP requests to access and use data."),

    ("Q5. What are migrations in Laravel?",
     "A: Migrations are version control for your database, allowing you to modify and share the database schema."),

    ("Q6. What is the difference between SQL and MySQL?",
     "A: SQL is a query language used to manage databases. MySQL is a relational database management system that uses SQL."),

    ("Q7. What is React.js?",
     "A: React.js is a JavaScript library for building user interfaces, developed by Facebook."),

    ("Q8. Difference between Tailwind CSS and Bootstrap?",
     "A: Tailwind CSS is a utility-first CSS framework, while Bootstrap is a component-based CSS framework."),
```

("Q9. What are Eloquent ORM in Laravel?",

"A: Eloquent ORM is Laravel's built-in ORM that allows interaction with the database using models instead of SQL queries."),

("Q10. What is WordPress?",

"A: WordPress is an open-source content management system (CMS) written in PHP, widely used for blogs and websites.")
